Type your comments here: With overlay the time and effort of dialing 10 #s will never go away. For a million calls the 5 seconds to read remember dial 3 extra #s wastes 83,333 minutes. With the split it's a one time event to learn a new code then it's over not something to live with for 20 years. Imagine teaching a child their phone # if its 10 digits. You may have not had a lot of attendance at public meetings but they'll get real excited when they have to dial 10 numbers to call across the street! Business spends millions advertising their phone #, with overlay they would have to "beat" 10 numbers into our heads. \\\  
Make sure Phone co has a long term intercept telling new area code. I have tried to call relatives that I didn't know had new codes and got endless rings or busy signals.  
Thanks GLW
